Consideration on IVAS code submission

- **Situation**

  › The SR contributions are agreed on 15th June PC call. However, we recently realized some issues with respect to this contribution and want to ask for opinions from PC.

- **Some issues found related to SR contributions**

  › There were no formal subjective listening results from third parities' XC that support to accept the SR contribution (35 Split Rendering Transmission Scheme LC3plus).

  › The SR contribution (21 Split Rendering) does not meet the IVAS design constraint on algorithmic delay. 43ms total delay exceeds the 40ms delay requirement.

  › The fact to have two SR Codecs in parallel but with similar functionality is not fully justified.

  › The relationship between IVAS specific SR solution and ISAR WI is not clear.

- **Suggestion**

  › Considering the quite several issues listed above and the fact that SR is not specified in IVAS WID, we propose not to include SR contributions in code package of IVAS candidate to be submitted to SA4. It is however suggested that the requirement of IVAS for a SR solution is to be addressed in ISAR WI.

Thank you
